4.6.1.5 User Interface

The ACT Manager's user interface (UI) will consist of HTML pages that will be viewed through the ACT's Web browser. The UI will consist of at least two screens. The first screen will be a login screen. The second screen will be a preferences screen. The preferences screen will contain the following information:

We will use JavaScript functions to enhance the behavior of the forms in the UI. JavaScript will allow us to write event handling functions to perform routine data validation on the form prior to submitting it to a JSP (Common Gateway Interface) program running on the server—a performance and usability enhancement.

ACT SAI

/* -1 apply at next logoff */

Tell ACT Utilities to display a Pop-up informational message sent by an administrator:

Field Name	Field Value
Command ID	DISPLAY MESSAGE
Config Password	XXXXXXXXXXXXXXXXXXXX
Target User ID	XXXXXXXXXXXXXXXXXXXX
Message	String message text

Query ACT Utilities for the current logged on User ID and password. This is used by the ACT Manager CGI to learn which user is logging in to the system.

Field Name	Field Value
Command ID	QUERY CURRENT USER
Config Password	XXXXXXXXXXXXXXXXXXXX
Target User ID	XXXXXXXXXXXXXXXXXXXX
Message	String message text
